Ebarki.

The next step, made clear.

A receipt is saved.
The order is still missing.

Consumers need to reconstruct scattered records before they can explain a dispute and prepare their next step.

CONSUMER ACCOUNT

BDT 5,500

FIRST RECEIPT

BDT 5,000

BDT 500 needs explaining

Fictional phone-order demonstration

A consumer resolution workspace

Built for Bangladesh. English + Bangla.

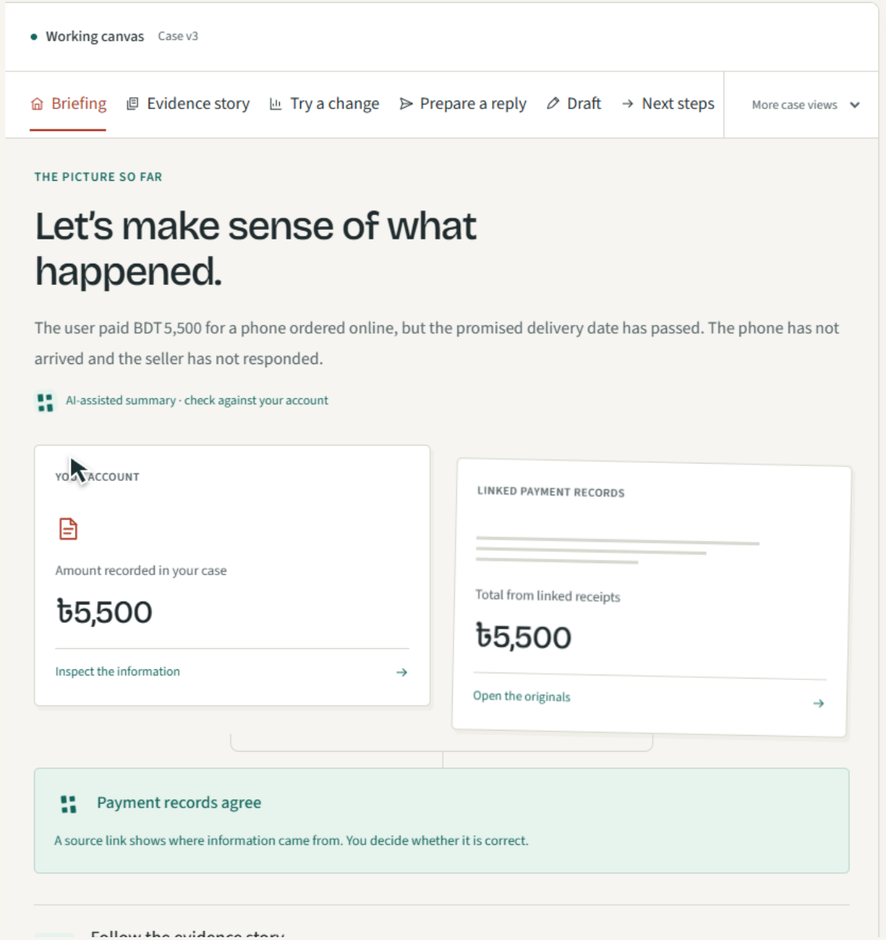

Evidence you can inspect

Keep the original account.
Connect each finding to its source.

Review the second payment. The linked receipts now explain the total without rewriting the consumer's story.

BDT 5,500

explained by two linked payments

Actual local application excerpt. Fictional evaluation records; no recovered-money claim.

Your records. Your review.

01 **Describe the problem**

Start in English, Bangla or Banglish.

02 **Read the evidence**

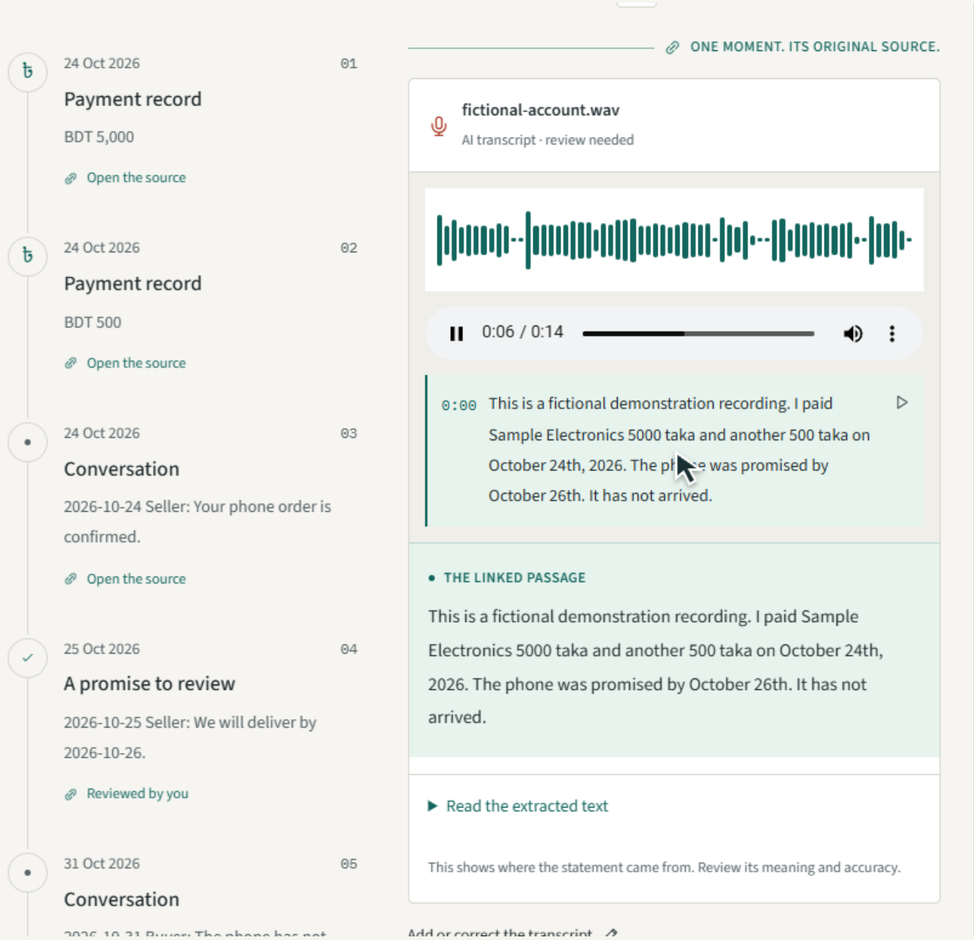

AI reads images and transcribes audio, with consent.

03 **Check what matters**

Inspect sources and compare possible next steps.

04 **Prepare your response**

Edit a reply or draft. Complete external steps yourself.

Original audio stays beside the proposed transcript. Model readings need human review.

Engineering you can inspect

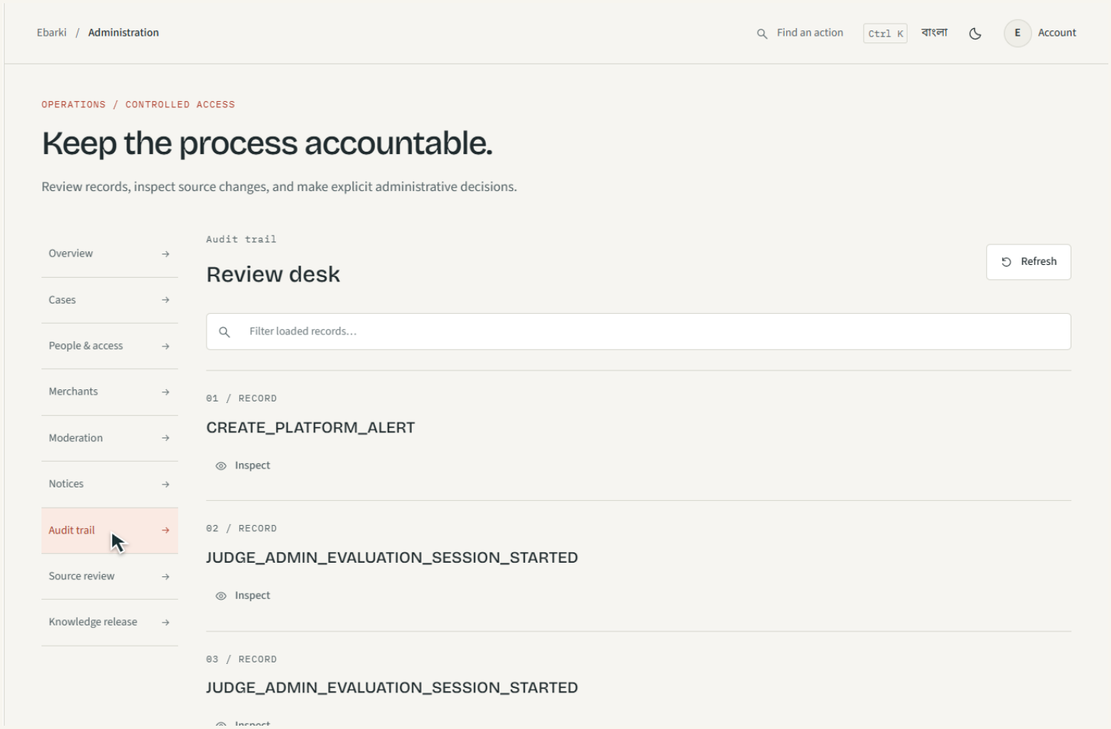

Models assist with language

Groq text, vision and speech calls produce reviewable output and execution receipts.

Rules remain explicit

Native PDF parsing. Lexical reference lookup. True / false / unknown conditions. Version checks before changes.

Administrative audit trail

Community is a seeded preview; new posts are disabled.

Built for a clearer next step

Sakibul Islam Shovon

Solo builder

211

automated tests passed

184 backend + 27 web tests; 7 backend warnings. Recorded on 5 November 2026.
